RESEARCH EXPERIENCE

EPFL, Laboratory for Computational Neuroscience Lausanne, Switzerland

Master's Thesis student
Oct 2020 – Apr 2021

- Designed \square an algorithm with Python 3, Pytorch and ray based on the \square "Consciousness Prior" proposal that finds a simple causal model of an RL environment in the general case from pixels. The project is a continuation of my Google Research internship (see below)
- The algorithm works on benchmarks, see my thesis for more details
- The work includes theoretical results on abstraction learning as well as a code base with tests and documentation
- · The thesis defended on the 21st of April 2021 with Adam Gleave (Berkeley/DeepMind) as an external expert

- Designed better defenses against adversarial policies in Multi-Agent Reinforcement Learning via alternating training of opponents using Python 3, Tensorflow, ray, rllib.
- · Ran hyperparameter sweeps on multiple machines with ray and rllib
- Converted legacy code using stable baselines and Tensorflow 1.0 to rllib and Tensorflow 2.0
- Results published as a blog post 🗗 "Defending against Adversarial Policies in Reinforcement Learning with Alternating Training" on the Effective Altruism forum
